

## Emailing to all members of a group

I recently helped one of our lifecycle customers in creating a process which would email to all members of a group

Lifecycle has an email component which needs a list of email id's, but unfortunately does not have the capability to email the group members

So I have written a simple process which emails members of a given group

The following are the steps involved in emailing group members

- A. Find the group
- B. Get the group members
- C. Iterate through the group members and create a list of email address
- D. Use the email component to email

I have attached the process xml and the process lca

If you do not see the attachments do (View | Navigation Panels | Attachments)

Import the lca from adminui, it should get imported in category called ESBlog

The process name would be emailGroup

If you have any further questions, do let me know

Thanks

girish
